

Remember, there are 3 ways to add CSS code:

- External CSS
- Internal CSS
- Inline CSS

## Please use External CSS

here's a review:

[https://www.w3schools.com/css/css\\_howto.asp](https://www.w3schools.com/css/css_howto.asp)

To create an external CSS page you would include the following code in the <head> of your .html page:

```
<link rel="stylesheet" type="text/css" href="mystyle.css">
```

You would then create a .css page titled **mystyle.css**

[ note: in class I think I used 365.css]

example:

```
<link href="365.css" rel="stylesheet" type="text/css" >
```

You may also try internal CSS styles.

In this case, you can put <style> tags in the <head> of your .html pages.

```
<head>
<title> title of page </title>
<style>
body {
  background-color: #000000;
}

h1 {
  color: maroon;
  margin-left: 40px;
}
</style>
</head>
```
