

How to add some color to your hyperlinks with CSS...

Here's a review:

https://www.w3schools.com/css/css_link.asp

Remember to add .css styles to visited and unvisited links.

Example:

```
<style>
/* unvisited link */
a:link {
  color: red;
}

/* visited link */
a:visited {
  color: red;
}
</style>
```

The `text-decoration` property is mostly used to remove underlines from links:

```
a:link {
  text-decoration: none;
}

a:visited {
  text-decoration: none;
}

a:hover {
  text-decoration: underline;
}
```

Finally, you can combine styles together, adding in background colors and padding.

Example:

```
a:link, a:visited {
  background-color: #000000;
  color: white;
  padding: 14px 25px;
  text-align: center;
  text-decoration: none;
}

a:hover, a:active {
  background-color: red;
}
```
